- 10 Permissions

1 What the module is

My Team is the supervisor's mirror of My Records. Each screen shows the same data as its personal counterpart, widened from one person to that supervisor's direct reports, and with the employee as the leading column.

SCREEN	SHOWS, FOR EVERY DIRECT REPORT
Team's Attendance	Daily clock-ins, clock-outs and worked hours
Team's Time Entries	A weekly roster, drillable into one person's grid
Team's Leaves	Every leave filed, with reason, notes and attachment
Team's Shift	Shift change requests and where they stand

2 Who counts as “my team”

Membership is a single field: `users.immediate_sup_id`. A user is on your team if their `immediate_sup_id` is your ID. That is a **direct** line only — it does not walk the chain, so a report's own reports do not appear.

Enforced server-side. Every team endpoint re-derives the subordinate list from the signed-in user. Asking for a user who is not your direct report returns **403**, so the filter cannot be bypassed by editing an ID in the URL.

3 Team's Attendance

One row per employee per day.

COLUMN	NOTES
Employee	Avatar initials, name and email
Time In / Time Out	Both on one column, stacked
Date	The attendance date
Working Hours	Net of deducted breaks
Status	Present, late, absent and so on

Filters cover employee, status and a date range, and the result set exports to CSV.

4 Team's Time Entries

Two views sharing one selected week.

Roster view

Every direct report for the chosen week: name, total hours and timesheet status. People who never started a sheet still appear, synthesised as `not started`, so the roster is a complete picture of the team rather than only those who filed.

Grid view

Clicking a person opens their week as the same read-only grid used on Time Entries — project, task, time type, memo and the seven day columns. Even an empty week renders its day headers, so the layout does not collapse.

A **Previous / Next** stepper moves the week, with the week label shown beside it.

Weeks are Monday-based. Dates are formatted in the browser's own timezone rather than UTC — converting first would roll local midnight back to Sunday, and because the API snaps to the Monday of the week, that would silently land on the previous week.

5 Team's Leaves

A table of every leave filed by the team: employee, leave type, start, end, duration, reason, notes, attachment, submitted and status. A Status dropdown filters the list and carries live counts, and the date range uses the same overlap test as Leave Requests.

- Reason and Notes are clamped to two lines, with the full text on hover.
- An attachment opens in a preview modal — images inline, PDFs in a frame, with Download as a fallback.
- The list is read-only. Approving happens on the Dashboard.

6 Team's Shift

Shift change requests from the team: employee, current shift, requested shift, effective date, reason, notes, submitted and status.

One gap to know about. The status dropdown offers All, Pending, Approved and Rejected. The database also stores `applied` — a request whose effective date has passed. Those rows are only visible under **All Statuses**.

7 Where approval actually happens

None of these four screens approve anything. They are the record; the decision is made in the **Requests** panel on the Dashboard, which is the single approval queue for leaves, shift changes and timesheets alike. The team screens are where a supervisor looks things up, filters and exports.

MY TEAM — REVIEW

DASHBOARD — DECIDE

STATUS UPDATES EVERYWHERE

8 Exports

Three of the four screens export CSV, each behind its own permission so export can be withheld without withholding the view:

SCREEN	PERMISSION	SCOPE OF THE FILE
Team's Attendance	export team attendance	The current filter
Team's Time Entries	export team time entries	The selected week
Team's Leaves	export team leaves	The current filter

9 API reference

VERB	PATH	PERMISSION
GET	/api/user/my-team-attendance/attendance	view team attendance
GET	/api/user/my-team-attendance/export	export team attendance
GET	/api/user/my-team-time-entries	view team time entries
GET	/api/user/my-team-time-entries/{user}/week	view team time entries
GET	/api/user/my-team-time-entries/export	export team time entries
GET	/api/user/my-team-leaves/leaves	view team leaves
GET	/api/user/my-team-leaves/stats	view team leaves
GET	/api/user/my-team-leaves/leaves/{leave}/attachment/download	view team leaves
GET	/api/user/my-team-leaves/export	export team leaves
GET	/api/user/my-team-shift/requests	view team shift

10 Permissions

PERMISSION	HELD BY
view team attendance · export team attendance	Super Admin, Manager, Team Lead
view team time entries · export team time entries	Super Admin, Manager, Team Lead
view team leaves · export team leaves	Super Admin, Manager, Team Lead

PERMISSION	HELD BY
view team shift · approve shift requests	Super Admin, Admin, HR, Manager, Team Lead

Permission is necessary, not sufficient. Holding view team attendance does not reveal the whole company — the result is still filtered to your own direct reports. A Manager with nobody reporting to them sees four empty screens.
