People Portal · Laravel 12 + Vue 3

Covers **My Records** → **Time Entries** and **My Team** → **Team's Time Entries**

1 What the module is

Time Entries is a **weekly timesheet**, modelled on NetSuite. Instead of logging each day separately, you fill one grid per week: every row is a piece of work, and the seven columns are Monday to Sunday.

A week always runs **Monday to Sunday**. Any date you open resolves back to that week's Monday, so there is exactly one timesheet per person per week — enforced by a unique constraint on `(user_id, week_start)`.

Two screens, one dataset. *Time Entries* under My Records is where you file your own time. *Team's Time Entries* under My Team is where a supervisor reviews their direct reports. Both read the same `timesheets` table; only the vantage point differs.

2 Time Entries — filing your own week

The weekly list

The landing view lists recent weeks — by default the **last 8 weeks** up to the current one. Weeks you have never opened still appear, synthesised on the fly with a zero total, so a week you forgot is visible rather than missing. Clicking any row opens that week's grid.

COLUMN	MEANING
Start Date	The Monday the week begins, with the full week label beneath
Total Hours	Sum of every line, shown as H:MM (so 40.5 reads 40:30)
Approval Status	draft, pending, approved or rejected

The week grid

Each row describes one stream of work; you type hours into the day cells. Column totals sit in the header, so the daily and weekly sums update as you type.

PROJECT / TASK	TICKET	TIME TYPE	MON 28	TUE 29	WED 30	THU 1	FRI 2	SAT 3	SUN 4	TOTAL
Northwind Driver App	CW-1010	Scrum	1:42	2:36	1:36	—	—	—	—	5:54
Bayanihan Loan Origination	CW-1011	Admin - Internal	2:00	1:54	2:18	—	—	—	—	6:12
Daily totals			3:42	4:30	3:54	0:00	0:00	0:00	0:00	12:06
FIELD		WHAT IT IS								
Project / Task		Which project the work belongs to. Optional — leave blank for non-project work.								
Project Ticket		Free text for your tracker reference, e.g. CW-1010.								
Time Type		The kind of work. Drawn from a lookup table HR curates; each type carries a colour and a billable flag.								
Memo		A short note on what was actually done.								
Mon – Sun		Hours as a decimal, in quarter-hour steps, 0–24 per day.								
Hours are stored as decimals (decimal(5,2)) but displayed as H:MM everywhere — 7.5 shows as 7:30 .										
Time Types										
Seeded with six types. The tint is what colours the chip in the grid.										
TYPE				TINT			BILLABLE			
Work General Stuff				green			Yes			
Scrum				orange			Yes			
Admin - Internal				purple			No			
Meeting				yellow			Yes			
Training				blue			No			
Support				cyan			Yes			

3 The approval lifecycle

STATUS	EDITABLE?	WHAT IT MEANS
draft	Yes	Created the moment you first open a week. Yours to edit freely.
pending	No	Submitted and locked, waiting on your supervisor.
approved	No	Signed off. Permanently locked; the approver and timestamp are recorded.
rejected	Yes	Sent back with a note. Unlocked so you can fix it and resubmit.

Submitting

- A week needs **at least one line** — submitting an empty grid is refused with *"Add at least one line before submitting."*
- The approver is set automatically to your **immediate supervisor**.
- Any previous rejection note is cleared, so a resubmitted week arrives clean.

What locking actually enforces

Editing is guarded server-side, not just hidden in the UI. Every write checks two things:

- The timesheet belongs to you — otherwise 403 That timesheet is not yours.
- The status is draft or rejected — otherwise 422 A pending timesheet cannot be edited.

Why rejection unlocks rather than deletes. Sending a week back sets it to `rejected` and stores the reason. The grid shows the note at the top, the owner fixes the lines, and resubmitting puts it straight back in the approver's queue. Nothing is retyped.

4 Team's Time Entries — the supervisor view

The personal screen answers *"which of my weeks are done?"* — one person, many weeks. A supervisor needs the opposite, so this screen **inverts the axes**: the week is the filter and the people are the rows.

The roster

Pick a week with Previous / Next, optionally search by name, and you get one row per direct report:

EMPLOYEE	TOTAL HOURS	LINES	APPROVAL STATUS
Divina Reyes	0:00	0	NOT STARTED
Enrico Santos	0:00	0	NOT STARTED
Team Lead User	24:54	4	DRAFT

People who have filed nothing still appear, as `not started`. A query that returned only existing timesheets would hide exactly the people a supervisor most needs to chase. The summary line counts only *pending* and *approved* as "submitted", so a draft never reads as done.

A summary strip above the table gives the week at a glance: how many team members, how many have submitted, and total hours logged.

Drill-down

Clicking a row opens that person's week in the same grid as the personal screen — same day headers, same column totals, same coloured Time Type chips — but **read only**. The week stepper carries across both views,

so you can walk one person back through several weeks and return to the roster on whichever week you landed on.

Export

Export CSV downloads the selected week for the whole team: one line per timesheet row, plus a row for anyone who has not filed, so the file matches what is on screen. Columns are Employee, Email, Week, Status, Project/Task, Ticket, Time Type, Memo, Mon–Sun and Row Total.

Scope

A supervisor sees **direct reports only** — users whose `immediate_sup_id` is the signed-in user. It is not recursive: a manager does not see their team leads' teams. Opening a week for someone who is not your direct report returns `403 You can only view the time entries of your direct reports.`

5 Approving and sending back

Approvals happen on the Dashboard, not here. Team's Time Entries is deliberately read only, so there is one place where approvals are actioned rather than two.

Pending timesheets from your direct reports appear in the Dashboard **Requests** row, in a card labelled *Time Entries*. Opening it shows the pending list; picking one shows the full week grid — the actual lines being signed off, not just a total — with Approve and Reject beneath it.

- **Approve** locks the week, records you as approver with a timestamp.
- **Reject** requires a reason. Without one you get *"Please provide a reason for rejection."* The week returns to the owner, editable, with your note displayed.
- Approving twice is refused: *"This timesheet is already approved."*

6 Data model

Three tables. All use soft deletes.

TIME_TYPES

The lookup HR curates. `name`, `tint` (chip colour), `description`, `is_billable`, `is_active`, `sort_order`.

TIMESHEETS

One row per person per week.

COLUMN	NOTES
<code>user_id</code> , <code>week_start</code>	Unique together — one sheet per person per week
<code>week_end</code>	Always the Sunday of that week
<code>status</code>	draft / pending / approved / rejected

submitted_at	Set on submit
approver_id, approved_at	Who signed off and when
rejection_note	The reason a week was sent back; cleared on resubmit

TIMESHEET_ENTRIES

The grid rows.

COLUMN	NOTES
timesheet_id	Parent week
project_id, project_ticket	Optional project link and free-text reference
time_type_id	FK to time_types
memo	Short description
mon_hours ... sun_hours	Seven decimal(5,2) columns, one per day
sort_order	Row order within the week

Totals are computed, never stored: a row total is the sum of its seven day columns, a week total is the sum of its rows, and a daily total is the sum of one column across rows.

7 API reference

All routes sit under `/api/user`.

TIME ENTRIES (OWN)

METHOD	PATH	PURPOSE
GET	<code>/time-entries</code>	Weekly list; startDate/endDate optional
GET	<code>/time-entries/week</code>	One week's grid; creates the draft if absent
GET	<code>/time-entries/time-types</code>	Active time types
GET	<code>/time-entries/projects</code>	Projects for the dropdown
POST	<code>/time-entries/{timesheet}/entries</code>	Add a line
PUT	<code>/time-entries/{timesheet}/entries/{entry}</code>	Update a line
DELETE	<code>/time-entries/{timesheet}/entries/{entry}</code>	Remove a line
POST	<code>/time-entries/{timesheet}/submit</code>	Submit for approval

TEAM'S TIME ENTRIES

METHOD	PATH	PURPOSE
GET	/my-team-time-entries	Roster for a week; date, user_name
GET	/my-team-time-entries/export	CSV of the week
GET	/my-team-time-entries/{user}/week	One member's grid, read only

APPROVALS (DASHBOARD)

METHOD	PATH	PURPOSE
POST	/dashboard/timesheets/{timesheet}/approve	Approve and lock
POST	/dashboard/timesheets/{timesheet}/reject	Send back; note required

8 Permissions

PERMISSION	GRANTED TO
view / create / edit / delete / submit my time entries	Super Admin, Admin, HR, Manager, Team Lead, Employee
view team time entries export team time entries	Super Admin, Admin, HR, Manager, Team Lead
view / create / edit / delete time types	Super Admin, Admin, HR

Everyone files their own time. Only roles that supervise can see a team. Only HR-side roles curate the Time Type lookup.
